

Kawai VPC1 F-30 Pedal Calibration Instructions

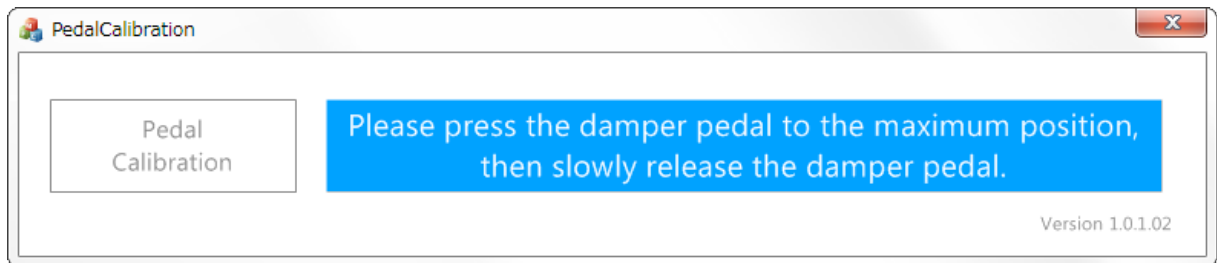

⚠ **Before using the Pedal Calibration tool, ensure that the VPC1 controller is using firmware version v1.04 or later.**

Double click the “PedalCalibration” icon to launch the Pedal Calibration tool.

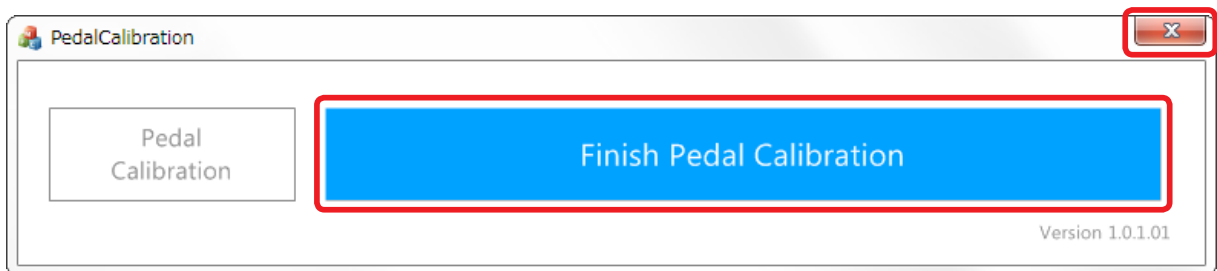

Click the “Start Pedal Calibration” button to begin the pedal calibration process.

Slowly depress the damper (right) pedal of the F-30 pedal unit to the maximum position, then slowly release the damper pedal. Repeat this process a few times to ensure that the damper pedal's minimum and maximum range of values are detected correctly.

Click the “Finish Pedal Calibration” button to finalise the pedal calibration process, then click the X button in the top-right corner of the window to exit the Pedal Calibration tool.

The VPC1 pedal calibration is complete, and the F-30 pedal unit should now send the full range of damper pedal values correctly.
